DETAILED ACTION

Claim Objections

1. Claims 15-19 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot dependent on two different statutory classes (e.g. composition, terpolymer). See MPEP § 608.01(n). Accordingly, the claims 15-19 not been further treated on the merits.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, the Applicant should refrain from using parenthetical language in the claims because such language tends to either broaden or narrow the scope of the claim beyond that which is intended by an otherwise definite expression. Parenthetical language is appropriate, however, in the

Art Unit: 1713

specification. It is suggested that the Applicant delete parenthetical language.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1, 5 and 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mukaiyama et al., U.S. Patent No.

Art Unit: 1713

4,737,526 (hereinafter "Mukaiyama"). Mukaiyama discloses that concrete examples of crystalline fluorine containing polymers include vinylidene fluoride-hexafluoropropylene polymer composition. See Mukaiyama, col. 4, line 45 through col. 5, line 18. Mukaiyama further discloses that the crystalline fluorine containing polymers many contain ethylene. See Mukaiyama, col. 2, lines 62-68. The present invention differs from Mukaiyama, in that Mukaiyama does not specifically teach a terpolymer containing the monomer compositions of the present claims. The basic requirements of prima facie case of obvious are: (1) there must be some suggestion or motivation, either in the reference themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings; (2) there must be a reasonable expectation of success; (3) the prior art reference (or references when combined) must teach or suggest all the claim limitations. See MPEP 2143. "There are three possible sources for a motivation to combine references: the nature of the problem to be solved, the teachings of the prior art, and the knowledge of persons of ordinary skill in the art." See In re Rouffet, 149 F.3d 1350, 1357, 47 USPQ2d 1453, 1457-58 (Fed. Cir. 1998). Although Mukaiyama does not disclose in the working

Art Unit: 1713

fluorine containing terpolymer of the present invention, based on the specification as a whole a polymer chemist of ordinary skill in the art would be motivated to modify Mukaiyama by introducing ethylene to crystalline fluorine containing polymers. Such modification would be obvious because one would is a reasonable expectation of success that crystalline fluorine containing polymers as taught by Mukaiyama would be similarly useful and applicable to fluorine containing terpolymer. Therefore, claims 1, 5 and 8-14 are deem as being unpatentable over Mukaiyama.
